People who solved Quicksort 1 - Partition attempted this next:

Counting Sort 1

Count the number of times each value appears.

Solve Challenge

Submitted Code

Language: Python 3

Open in editor

```
1 def quickSort(arr):
2     # Step 1: Choose the pivot
3     p = arr[0] # The pivot is the first element of the array
4
5     # Step 2: Partition the array into three parts: left, equal, right
6     left = [x for x in arr if x < p] # Elements less than pivot
7     equal = [x for x in arr if x == p] # Elements equal to pivot
8     right = [x for x in arr if x > p] # Elements greater than pivot
9
10    # Step 3: Concatenate the partitions and return
11    return left + equal + right
12
13 # Example usage
14 if __name__ == "__main__":
15     n = int(input().strip()) # Read the size of the array
16     arr = list(map(int, input().strip().split())) # Read the array elements
